

E-7 Case Erector Pack off System

Case erector for stand-up pouches and bags utilizes Moving Tape Head Technology™ to bottom seal corrugated cases and manually pack product. Pouches and bags are collated, counted and neatly organized for easy case packing by the operator. Customers report quick payback of less than six (6) months. The Collator makes packing more efficient and ergonomically friendly over traditional turntable pack-off lines, eliminating repetitive twisting motions and simplifying product pick-up and case packing by the operator. Case counts are selected on the control panel eliminating counting errors. Compact, portable, and flexible. The system changeover from size takes 2 min.

6 Month Payback!

Up to 15 cases per minute

24 VDC power for controls

80 PSI - 1CFM compressed Air required
