

Ancillary EQUIPMENT

We carry a full line of accessory equipment to compliment your packaging system to make it as efficient and easy to run as possible. The performance of your system is as good as the weakest link in that system. Details maximize your performance.

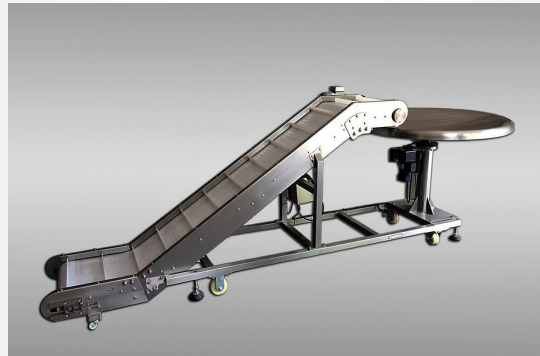

Mezzanines

High Quality 304 Stainless Steel Platform Mezzanines. Handrails, stairs and anti-slip aluminum decking plate with button head SS screws. Adjustable ladder with adjustable feet. Custom configurations available for dual platforms and multiple units. First class "Fit and Finish"

Take Away "Z" Conveyor

Take away conveyors remove the product from the bagger and bring them up to the production line height. Custom "flights" for your specific application with smooth quiet variable speed operation. Easy to clean for quick change over to multiple products.

Rotary Pack Off Tables

Variable speed rotary pack off tables speed up the pack out operation making it easier to exhaust the product from the bagging system. The unique dished out design "without a lip" speeds up the process even more; allowing the operator to "scoop and slide" the product out faster then having to lift it over an edge like you have to do with a traditional turntable.

Pack Off Tables are available as separate units to allow room for additional equipment like checkweighers and metal detectors between the conveyor and table; and also as a combination unit as shown in the photo to the right
